RENDERING

Modern rendering systems

Why Choose Us

With over 20 years of experience, we are experts in precision rendering, delivering flawless results every time. As approved installers for five leading manufacturers, we use only the highest-quality materials. Not only do you get a 30-year material warranty, but we also offer additional guarantees to ensure your render stays beautiful for years to come.

Every project is treated as if it were our own, combining meticulous attention to detail with a passion for perfection. From on-site viewings to glowing customer reviews, our work speaks for itself.

To help you maintain your finished render, we provide clear aftercare sheets and direct access to our phone number for continuous support. Choosing us means choosing reliability, expertise, and a finish that truly stands the test of time.

When using monocouche we only use Weber, Ecorend or PRB Systems due to the quality, durability and workability of the product. We have done jobs 12 years ago and they look just as good now as when they were first installed.

With regards to our silicone based renders there's only one choice here and that's Johnstone's Stormshield; due to all the qualities it possesses; uv resistant, flexible, breathable and self cleaning not forgetting over 200 colours to choose from.

Monocouche

Monocouche renders are a type of decorative finish applied to the outside of buildings to provide both decoration and weather protection.

Derived from the French, and meaning mono or single layer, monocouche renders are modern single coat renders which can be applied by hand or machine. Colour pigmented throughout, meaning no building painting, monocouche renders provide a low maintenance, weather resistant, hard wearing and attractive finish to a large range of external brick and blockwork properties.

In recent years, Monocouche render has become a popular choice due to its professional finish and many other advantages it has to offer, compared to other rendering products on the market.

Weber. pral M (M meaning machine applicable) is a one coat colour through render. Monocouche is a cement based render system, manufactured for one coat application on suitable back grounds. Monocouche render is versatile, meaning it can be applied to many back grounds, from light weight block, brick work, stonework and most masonry construction. With the help from weber rendaid (modified base coat) and mono mesh, monocouche render can be applied to almost anything. We practise with webers specification in what we advise to be the best practice in all circumstances.

Benefits of Monocouche

One coat
(rapid installation)

UV resistant

Water resistant

Colour through
(low maintenance, no need for decoration)

Breathable

Monocouche finish

Silicone Render

Johnstone's Stormsheild silicone render systems provide superb quality, ease of application and a superior colour range.

The flexible anti-crack formulation and ultra-violet resistant pigments of a silicone or acrylic render allow for large areas to be seamlessly rendered with perfect colour consistency.

The unrivalled versatility of Johnstone's silicone thin coat renders allows the products to be specified with confidence to transform virtually any substrate, giving dull and tired looking structures a new lease of life.

Benefits of silicone render system

Vapour Permeable

It is vital with thin coat and EWI systems, that moisture generated within the property can pass the system, which is why all of our thin coat renders are vapour permeable to allow the building to breathe and reduce the risk of condensation.

Flexible

The flexible nature of our thin coat renders makes them ideal for substrates likely to have increased movement such as timber or steel frame structures.

UV Stable

The pigments, resins, binders and aggregates in Johnstone's Thin Coat render finishes are highly UV resistant and retain their colour and stability, ensuring a long-lasting finish.

Anti-Algae

Our thin coat renders have been specifically developed to combat the algae growth that has escalated due to the climate changes over recent years. Our products contain biocides and algicides that leach out over time to help prevent unsightly growth on a property.

Water Repellency

The addition of silicone to our increases the product's repellency, significantly reducing the dirt and environmental pollution that can adhere to the surface, while also improving the self-cleaning properties of the finish, which occur through rainfall on the silicone.

EWI Render

A protective decorative coating applied over an external wall insulation system. It sits on top of insulation boards (like EPS or mineral wool) and a reinforced basecoat.

There are three types of EWI render:

- Acrylic (flexible, cost-effective)
- Silicone (highly breathable, self-cleaning)
- Mineral (cement-based, very breathable)

These are available in smooth or textured finishes and benefit from a wide range of colours

Insulate, protect and transform your home with EWI Render

Benefits of EWI render system

Weatherproofs the system
(rain, wind)

Crack-resistant

Protects insulation from damage

Vapour permeable
(lets moisture escape)

Provides final appearance
(colour/texture)

UV and algae resistant
(varies by type)

Machine Application

Due to our heavy demand of work we use a Ritmo Slimline Turbo (rendering machine) meaning we can turn around projects in no time which allows us to continually turn houses into homes; not forgetting garden walls, commercial projects, offices, extensions, apartments, and many more.

Machine application gives a consistently sharp finish even in awkward places

Benefits machine application

Rapid installation

Consistent colour

Less mess

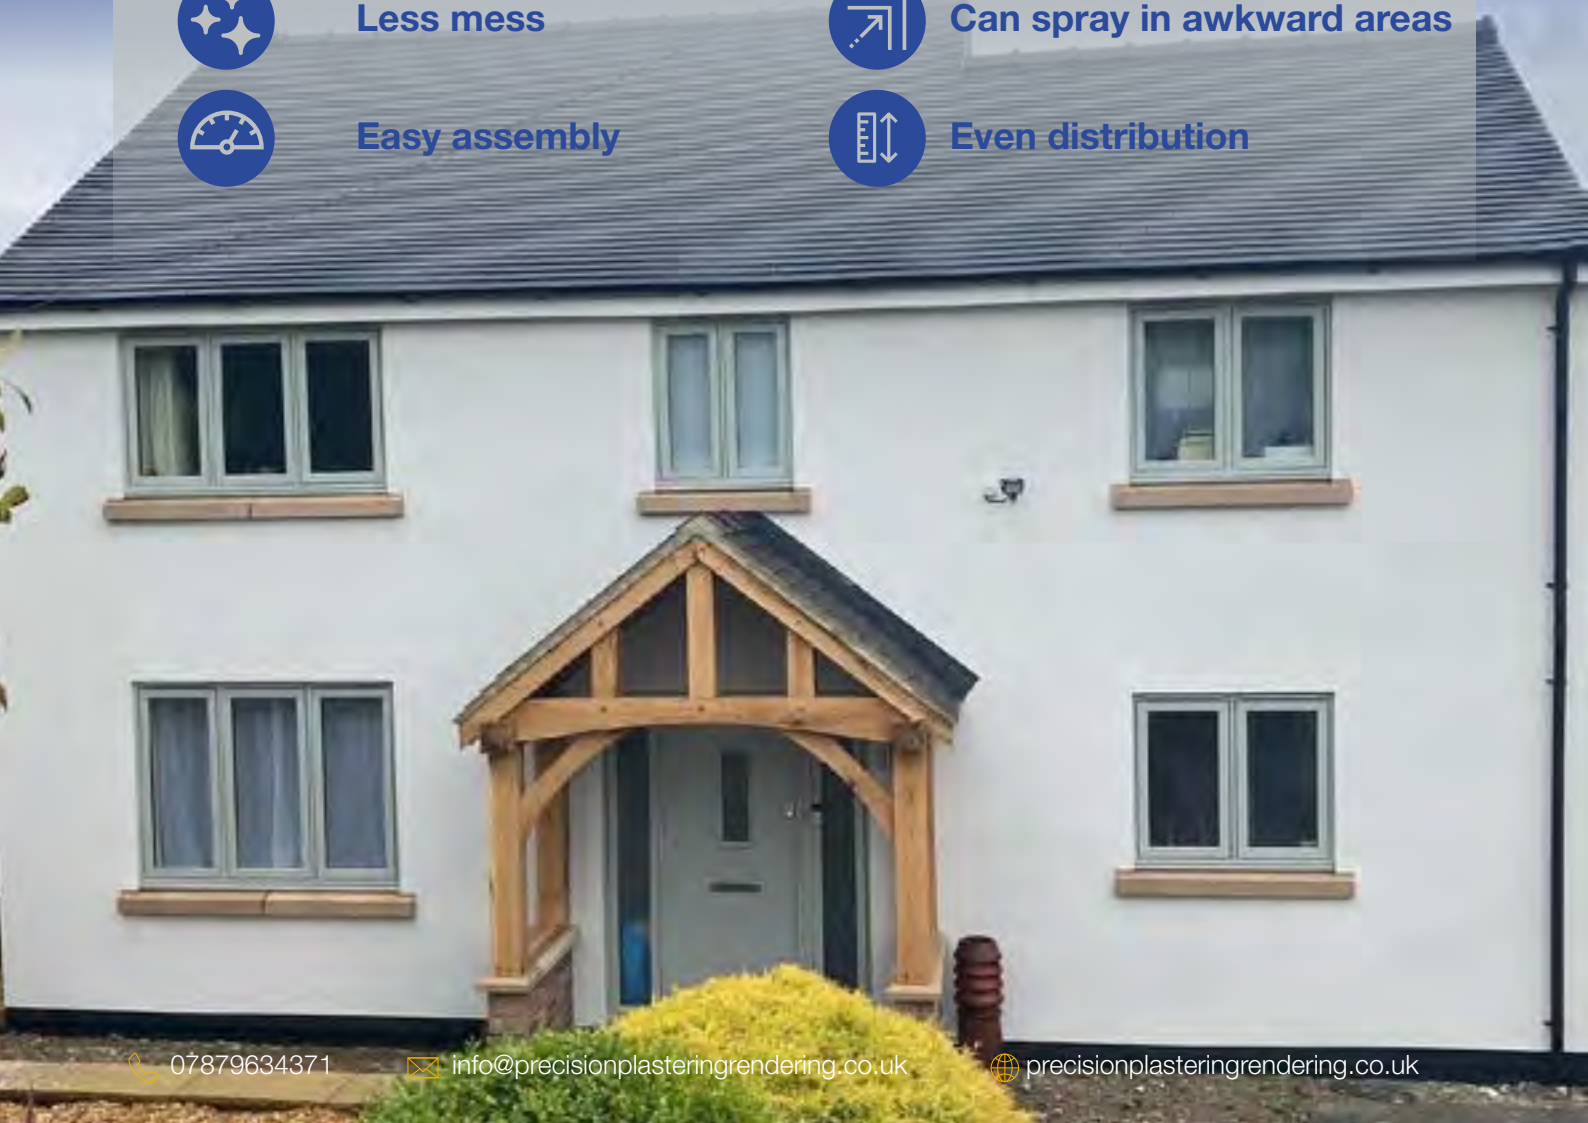

Can spray in awkward areas

Easy assembly

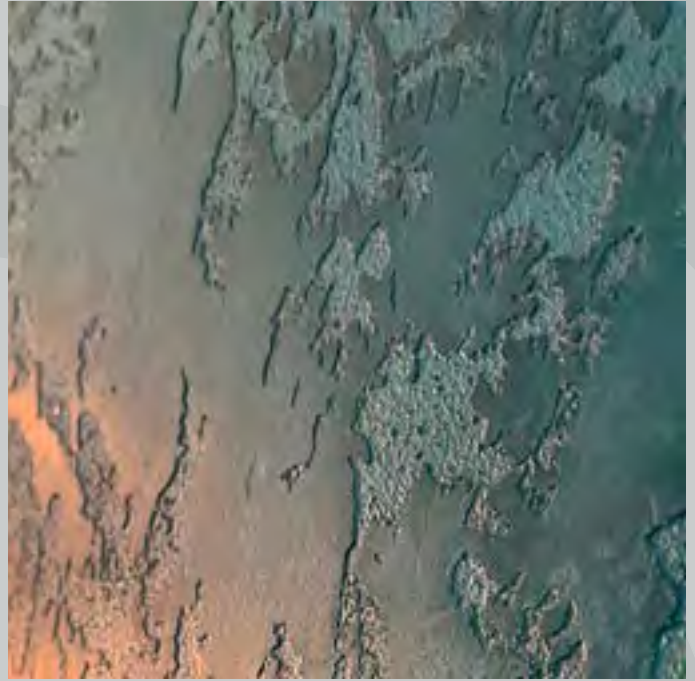

Even distribution

Venetian plastering

Venetian plastering is a decorative finishing technique that uses thin layers of polished plaster—traditionally made from lime and marble dust—to create a smooth, glossy, marble-like surface on walls or ceilings. It's applied with a trowel in multiple layers and then burnished to achieve depth, texture, and a luxurious sheen.

Your project in safe hands

- ✓ Trusted by homeowners and businesses alike for reliable, high-quality workmanship
- ✓ Friendly, professional service from first contact through to project completion
- ✓ Tailored solutions to suit both domestic and commercial requirements
- ✓ Fully committed to delivering a flawless finish you can be proud of
- ✓ Clear communication and honest advice every step of the way
- ✓ Clean, efficient work with minimal disruption to your space
- ✓ Competitive pricing with no hidden surprises
